

Integrate CX with Other Critical Business Applications

Quickly Integrate Business Critical Solutions that Promote Better Customer Experiences and Increase Sales

Modern businesses run on hundreds of different applications that provide the data needed to support a differentiated customer experience. The challenge for companies of all sizes is that these applications are islands, operating independently and managing their own data. Each application has a piece of the puzzle – critical data that must be combined to seamlessly support an end-to-end business process like quote-to-cash or lead-to-order. However, building integrations to enable these cross-system processes can be cost-prohibitive.

Sugar Integrate solves this problem with a cloud-based integration platform that provides pre-made integrations to key business applications, helping customers fulfill integration needs more efficiently and accelerate business benefits. With Sugar Integrate, the platform does the work – providing you with a high-definition 360-degree view of your business.

With Integrate, Each Integration Leverages Previous Integrations to Maximize Efficiency and Accelerate Time to Value

Integrate makes every integration a reusable integration artifact, from custom fields to integration logic, to extending or creating new Adapters. Integrate provides a one-to-many integration approach in which each subsequent integration takes less time and effort to build.

sugar integrate

Integrate Processes ///

Seamlessly join related processes and leverage customer data across system boundaries.

Maximize Efficiency ///

Leverage over 200 pre-built reusable integration components to build and launch integrations at lightning speed.

Manage Centrally ///

Develop, deploy, and administer all your integration from a single console.

Integrate helps you achieve these efficiencies with:

Adapters

A Integrate Adapter is a pre-built API connection resource to a cloud or on-premise application that normalizes and enhances the native endpoint. Adapters provide a standardized access and data specification including normalized APIs, authentication, model schemas, paging, bulk API's, and event management.

Adapter Builder

Users can quickly customize existing Adapters or build new ones using Adapter Builder, which enables users to easily adapt the specifications of the native API endpoint to their needs.

Common Resources

Provides a normalized view of data objects (such as "accounts" or "orders"), data mappings and transformations. This single normalized data model effectively eliminates the need for point-to-point mapping of data, saving you the effort and insulating integrations from changes to the endpoint API or data schema.

Pre-Built Templates

Integrate includes pre-built templates that support key business processes, allowing customers to leverage best practices and be up and running in a shorter time period.

Procedures

Build reusable and powerful event-based workflows. Users can set automated or manual triggers, orchestrate multiple API calls and data transformations that incorporate business logic, and create reusable resources (templates) and API-accessible Adapter-as-a-Resource within Adapters.

Data Loader

Integrate provides a migration tool that enables organizations to migrate easily from other CX products to Sugar, providing bulk data transfer capabilities, even for systems that do not natively support bulk transfer.

A Single Platform to Future-Proof Your Investment

Business and technology are constantly evolving, sometimes requiring companies to replace key business systems in order to address new requirements or take advantage of the latest technologies. The Sugar Integrate solution normalizes the thousands of unique endpoints and data models to future-proof your Sugar investment, allowing you to switch business applications without having to re-integrate them with Sugar.

Moving to More Modern Solutions Made Easy

Many solution purchasing decisions are delayed because organizations cannot afford to lose their historical customer and sales data that they have spent years gathering and maintaining. Sugar Integrate eliminates this concern with built-in data transfer capabilities that simplify moving data into Sugar from other CX products, including ones do not natively support bulk data operations.

About SugarCRM

SugarCRM is how marketing, sales, and service teams finally get a clear picture of each customer to help businesses reach new levels of performance and predictability. Sugar is the CRM platform that makes the hard things easier.

Thousands of companies in over 120 countries rely on Sugar to achieve high-definition CX by letting the platform do the work. Headquartered in Silicon Valley, Sugar is backed by Accel-KKR.
